1 Introduction

- 1.1 The Caerphilly County Borough Local Development Plan up to 2021 (LDP) was formally adopted by Caerphilly County Borough Council (CCBC) on the 23 November 2010. Following the adoption of its LDP, the Council has a statutory obligation under section 76 of the Planning and Compulsory Purchase Act 2004 to produce an Annual Monitoring Report (AMR) for submission to the Welsh Government (WG).
- 1.2 This, the third AMR, is based on the period from 1st April 2013 to 31st March 2014 and is required to be submitted to WG by the end of October 2014.
- 1.3 The main aim of the AMR is to assess the extent to which the LDP Strategy and Strategy Policies are being achieved. It therefore has two primary roles, firstly to consider whether the policies identified in the monitoring process are being implemented successfully; and secondly to consider the plan as a whole against all of the information gathered to determine whether a complete or partial review of the plan is necessary.

- 1.4 The second AMR, produced for the period 1st April 2012 – March 31st 2013 concluded that whilst the LDP Development Strategy remained sound, the downturn in the economy has had a marked effect on house building rates within the county borough and there was a need therefore to address the supply of housing land. Furthermore the second AMR recognised that in order to facilitate the Council's ambitious school rationalisation programme there was a need to identify sites for education provision, which necessitated a review of the plan.
- 1.5 The 2013 AMR therefore recommended that the Caerphilly County Borough Local Development Plan should be rolled forward to cover the plan period up to 2031, and the Evidence Base and Policies across all topic areas be reviewed to ensure that all forecasts and assumptions underpinning the plan and contained within the Policy Framework of the plan cover the revised plan period.
- 1.6 The Council resolved to accept the recommendations of the 2013 AMR at its meeting on the 8th October 2013.

The Requirement for Monitoring

- 1.7 In order to monitor the plan's performance consistently, the plan needs to be considered against a standard set of tests or issues. Appendix 19 of the LDP sets out the Monitoring Framework that forms the basis of the AMR and provides information that is required to be included by LDP Regulation 37. In this context the AMR is required to:
- Identify policies that are not being implemented and for each such policy;
 - Outline the reasons why the policy is not being implemented,
 - Indicate steps that can be taken to enable the policy to be implemented.
 - Identify whether a revision to the plan is required.

- Specify the housing land supply from the Housing Land Availability Report for that year and for the full period since the adoption of the plan.
- Specify the number of net additional affordable and general market dwellings built in the LPA area for that year, and for the full period since the adoption of the plan.

1.8 The LDP Manual supplements this requirement by setting out additional factors that should be assessed in the AMR, namely,

- Whether the basic strategy remains sound (if not, a full plan review will be needed);
- What impact the policies are having globally, nationally, regionally and locally;
- Whether the policies need changing to reflect changes in the national policy;
- Whether policies and related targets in the LDP have been met or progress is being made towards meeting them, including publication of relevant supplementary planning guidance (SPG);

- Where progress has not been made, the reasons for this and what knock on effects it may have;
- What aspects, if any, of the LDP need adjusting or replacing because they are not working as intended or are not achieving the objectives of the strategy and/or sustainable development objectives; and

If policies or proposals need changing, the suggested actions are required to achieve them.

1.9 Monitoring the plan also accords with the requirement for monitoring the sustainability performance of the plan through the Strategic Environmental Assessment/ Sustainability Assessment (SEA/SA).

Format and Content

1.10 The AMR is the main mechanism for reviewing the relevance and success of the LDP and identifying any changes that might be necessary. The main principle of the monitoring process is to identify when the revision of the LDP should take place.

1.11 Inevitably, the monitoring process involves the collection and interpretation of significant amounts of information. Inclusion of this information within the AMR would lead to the report being overly long and difficult to use. Consequently, the data analysis that informs the AMR will not be contained within the report itself.

1.12 The structure of the AMR is as follows:

- Executive Summary: A succinct written summary of the key findings.
- Contextual Changes: A written account of any changes in circumstances outside the remit of the plan that could affect the performance of the policy framework.
- Sustainability Monitoring: A written statement outlining the principal findings

of the monitoring of the plan against the indicators identified in the SEA/SA Scoping Report, identifying the main effects and if a review of the plan is necessary on sustainability grounds.

- **Policy Monitoring:** A written statement of the main findings of the Monitoring Framework, including identification of policies that have reached their trigger points; assessments of whether those policies require amendment taking account of any mitigating circumstances, and recommendations for action to secure the policy's successful implementation.
- **Mandatory Monitoring Indicators:** A written statement addressing the findings in respect of the Mandatory Indicators, which are set out of the LDP Manual. The commentary will identify the current figures and relate them to previous years' figures to provide an overview of each indicator.
- **Recommendations:** A statement of actions that will be required to be taken in respect of the findings of the Monitoring exercise, including a statement on whether any policies need adjusting and/or whether there are any further amendments to the plan required.

What Should Be Monitored

- 1.12 In order to monitor the success of the LDP Strategy, the AMR monitors the policies that have been included in the plan specifically for the purpose of realising the strategy i.e. the Strategy Policies.
- 1.13 The Strategy Policies are the point from which the Countywide and Area Specific policies are derived. The successful implementation of the Countywide and Area specific policies will assist in realising the Strategy and therefore the Strategy Policies provide a reasonable gauge of how the other policies, as a framework, are fairing and whether there are any policies that are failing to deliver.

How is the Plan Monitored

- 1.14 As part of the preparation of the Plan, a Monitoring Framework was devised that would enable a statistical analysis to be undertaken to ascertain whether policies in the plan are being implemented. The Monitoring Framework is set out in Appendix 19 of the LDP.

Changes to the Monitoring Framework

- 1.15 Both the LDP Monitoring Framework and the SEA/SA Monitoring Framework are set out in the Appendices of the Adopted LDP (Appendix 19 and 18 respectively). Appendices are part of the Adopted LDP and, as such, cannot be amended without undertaking a formal review of the Plan.
- 1.16 The monitoring process is dependent upon a wide range of statistical information that is sourced from local authority and external sources. Whilst the council can control information that it supplies, there is a significant risk of change in respect of external data as that information is out of the control of the local planning authority.
- 1.17 In order to ensure that the policies are effectively monitored throughout the life of the plan, where circumstances have changed so that it renders an indicator obsolete, one of three actions will be taken:
- **Amendment:** The Indicator will be amended to re-align it with relevant data. The amendment will not seriously change the nature or scope of the Indicator/Factor, but will allow it to be considered against a different or amended data set.
 - **Replacement:** The Indicator will no longer be used and be replaced by an indicator that monitors a similar issue to the original.
 - **Omission:** The Indicator becomes obsolete and is omitted, as there are no other similar factors or data sets available to monitor that issue. This is the last resort action and omitted

Indicators will be reviewed yearly to identify whether new data sets have become available that could be used to monitor its policy.

Assessment and Conclusions

- 1.18 As previously indicated the AMR has two primary roles; firstly to consider whether the policies identified are being implemented and secondly to consider the plan as a whole against all of the information gathered to determine whether a complete or partial review of the plan is necessary.
- 1.19 It should be noted, that whilst there is a significant amount of statistical information gathered and used in the monitoring process, the information gathered through this process must be tempered with judgement exercised through complete consideration of the policies and issues raised. It would be inappropriate for the statistical information to solely and directly dictate when policies, or the plan as a whole, required amendment. A more measured and considered approach that takes account of these factors, whilst acknowledging the findings of the monitoring information provides the best approach to ensure effective monitoring of the plan.
- 1.20 The AMR must therefore, specifically and directly identify its findings. If policies are found to be failing, clear recommendations on what needs to be done to address this will be identified in Section 6 of the Report.
- 1.21 In addition to this, as the AMR for 2012-13 triggered the review of the Adopted LDP, the AMR for 2013-14 will need to take into consideration the review process and any amendments or removals of existing policies and how this will effect the proposed growth strategy for the revised LDP and identify new policies that should be considered for inclusion in the revised LDP.

2 Executive Summary

- 2.1 Section 76 of the Planning and Compulsory Purchase Act 2004 requires local planning authorities to monitor the implementation of their Adopted LDPs by preparing an Annual Monitoring Report (AMR) that is submitted to the Welsh Government (WG) each year. This is the third AMR for the Caerphilly County Borough LDP and the deadline for it to be submitted is 31st October 2014.

Background

- 2.2 The Council formally adopted the Caerphilly County Borough Local Development Plan (LDP) on 23 November 2010. The plan period runs up to 2021, with 2006 being the base date for the plan. Following the adoption of its LDP, the council has a statutory obligation under section 61 of the Planning and Compulsory Purchase Act 2004 to keep all matters under review that are expected to affect the development of its area. Section 76 of the Act requires the Council to produce information on these matters in the form of an Annual Monitoring Report for submission to the Welsh Government. This, the third AMR, is based on the period from 1st April 2013 to 31st March 2014 and is required to be submitted to WG by the 31st October 2014.
- 2.3 There have been many changes since 2006 that will impact on the successful implementation of the LDP, the most notable of which are:
- The downturn in the global economy, which has impacted on commercial and housing property markets; and
 - The identification and availability of sites for development within the region through the preparation of local development plans, most notably Cardiff City.
- 2.4 Given the changes in the Welsh Economy and the changes in the regional context, the third AMR will therefore consider whether the Development Strategy that underpins the

LDP remains valid; and will assess whether or not the Strategy Policies contained in the LDP are being effective in delivering the Development Strategy and meeting the objectives of the plan.

- National policy or legislation;
- External conditions;
- Local Considerations.

2.5 The LDP Regulations and the LDP Manual specify what the AMR is required to include as follows;

- An Executive Summary
- A review of changes to national and regional policy and guidance and their implementations for the LDP.
- SEA/SA Monitoring based on the SEA/SA Monitoring Framework (LDP Appendix 18)
- Statutory Indicators
- Recommendations on the course of action in respect of policies and the LDP as a whole.

2.6 In addition to the above, the AMR also considers external influences which impact on the implementation of the LDP but which are outside of the Council's control. Nevertheless the Council should consider whether or not a change in its policy framework could serve to alleviate some of the issues raised by these external factors.

2.7 Copies of the full AMR entitled "Caerphilly County Borough LDP Third Annual Monitoring Report 2014" together with the background statistical tables have been placed in the resource library for members' information.

Report of Findings

External Influences

2.8 The AMR considers the external factors that have had, or could have, an influence on the implementation of the plan and thus on development in the County Borough. These include changes in:

National policy and Legislation

2.9 The AMR is required to identify documents, at national and regional level, that may have implications for the policies in the LDP and to assess them to identify their implications. Welsh Government has issued the following key policy documents between 1 April 2013 and 31 March 2014:

- Planning Policy Wales, Edition 6, February 2014
- Technical Advice Note (TAN) 21: Waste, 2014
- Technical Advice Note (TAN) 23: Economic Development, 2014

2.10 The changes in National Policy and Legislation have not resulted in any significant changes to policy that needs to be addressed in the short term.

External Conditions

2.11 The downturn in the economy has had a marked effect on house building rates and therefore on the delivery of affordable housing. Viability continues to be a major issue in overall house building and this has an adverse impact on the levels of affordable housing that can be delivered through the planning system

2.12 If recommendations regarding the introduction of a regional planning tier are taken forward in the Planning White Paper, some matters such as housing numbers, transport infrastructure and the location of strategic employment sites will be determined regionally in the future.

2.13 The establishment of the City Regions in 2013 has seen a South East Wales City Region

board established to look at a range of economic and statistical evidence and data, and identification of issues affecting the Cardiff Capital Region, including transport, communications, planning, economic development and the Welsh language.

- 2.14 All neighbouring local planning authorities are well advanced with the preparation of their respective development plans providing a local policy framework for development decisions within the region.

Local Considerations

- 2.17 The second AMR (2012-13) identified significant local considerations that highlighted a need for the LDP to move to review. Specifically:
- The lack of a five-year housing land supply needs to be addressed, as the evidence available indicates that it is unlikely that this position will improve in the next few years; and
 - The need to identify suitable sites for new schools as a consequence of the Council's ambitious school rationalisation programme.

- 2.16 The Adopted LDP is now under review with an anticipated adoption date of October 2017.

Strategic Environmental Assessment/Sustainability Appraisal Monitoring

- 2.17 The Strategic Environmental Assessment Directive requires local authorities to undertake Strategic Environmental Assessment (SEA) as part of the preparation of the LDP. In addition to this the LDP Regulations requires a Sustainability Appraisal (SA) to be undertaken. In preparing the LDP the council undertook joint SEA and SA and produced and published its SEA/SA Report in conjunction with the LDP.
- 2.18 The SEA Directive also requires that the Council monitor the state of the environment through monitoring the sustainability objectives set out in the SEA/SA Report. This forms an integral part of the AMR and is contained in Section 4.

LDP Policy Monitoring

- 2.20 The LDP Monitoring considers each of the 22 Strategy Policies against the LDP Monitoring Framework to identify whether the policies are being effective and to identify any policies that are not being implemented. The Framework consists of 23 Indicators (overarching measures considered against time related targets) and 53 Factors (specific measures considered against a fixed Trigger Point). Both the Indicators and Factors are statistical measures relating to the delivery of a specific Strategy Policy and consideration of the Indicators and Factors will indicate whether the Policies are being implemented. Where an indicator does not meet a target, or a factor reaches a trigger point, it could indicate that the policy is not being implemented. In such instances the policy is considered in detail in the AMR.

2.20 An overview of the LDP Monitoring Data for the 3rd AMR period provides an interesting insight into the implementation of the LDP over the past 12 months. Of particular note for 2013/14 is the following:

- The annual house-building rate decreased slightly over the period from 390 to 344 dwellings in the previous year.
- The housing land supply figure decreased from 3.5 to 2.9 years using the Welsh Government preferred residual method.
- The average house price fell from £97,272 to £94,272.
- Unemployment fell from 9% to 8.4%.
- The number of residents in employment increased from 73,700 to 78,700.
- There was a general drop in commuting rates as a percentage of all commuting both in terms of out commuting for work, but a slight rise in out commuting generally from 45.9% to 50%.
- Vacancy rates in the Principal Towns of Caerphilly and Risca/Pontymister decreased over the period whereas vacancy rates in, Blackwood and Bargoed increased. Vacancy rates in Ystrad Mynach remained the same.
- Footfall in the Principal Town Centres declined by 12.1%
- The number of schools over subscribed in terms of the school rolls increased from 4 to 5.
- The use of aggregates within the construction industry continued to fall.
- There was an increase in customer satisfaction with the countryside recreation on offer in the county borough.

2.21 Section 5 of the AMR provides a detailed analysis of the success of the plan to date against the monitoring indicators and

factors in terms of delivering sustainable development. The findings are summarised in the Table below:

LDP Monitoring Summary Table		
Strategy Policy	Status	Progress
SP1, SP2, SP3, SP4, SP5, SP6, SP7, SP8, SP9, SP11, SP12, SP17, SP18, SP19, SP20, SP21	Policy is being met or exceeded. No intervention required.	
SP10, SP16, SP22	Policy is not delivering as anticipated but is delivering sufficiently and does not require intervention measures.	
SP13, SP14, SP15	Policy is failing to deliver as anticipated and intervention measures should be considered.	

Table 1 - LDP Monitoring Summary Table

2.22 As the review of the adopted plan is now under way, all of the policies will be reviewed in light of monitoring information and to reflect any changes in national policy since the plan was adopted in 2010.

Statutory Indicators

2.23 The LDP Manual requires that the AMR include information relating to 12 specific indicators. The information in respect of these is already contained within the LDP and SEA/SA monitoring frameworks and has been taken into account through the monitoring process. The statutory indicators will also be considered as part of the review of the plan and any amendments to policies will be measured in light of the information contained within the monitoring report. SP8 - Minerals Safeguarding

AMR Conclusions & Recommendations

- 2.24 The AMR concludes that whilst the LDP Development Strategy remains effective, the downturn in the economy has had a marked effect on house building rates. Viability continues to be an issue in overall house building and this has an adverse impact on the levels of affordable housing being delivered through the planning system.
- 2.25 The lack of a five-year housing land supply is a matter of concern that needs to be addressed if the overall housing requirement is to be met over the plan period. The monitoring evidence indicates that it is unlikely that this position will improve in the short term.

Recommendations

- R1 The 2014 Annual Monitoring Plan has indicated that substantial progress has been made in implementing the Caerphilly County Borough Local Development Plan up to 2021 and that the Development Strategy is being effective.**
- R2 That limited greenfield release be considered on sites that are acceptable in planning terms in order to address the lack of a five year land supply in the short term.**
- R3 That the First Review of the Caerphilly County Borough Local Development Plan continue to be progressed in line with the Welsh Government and Council Agreed Delivery Agreement (13 February 2014).**

Contextual Changes

- 3.1 External changes need to be considered as part of the AMR and what affect these have upon the AMR results. In the 2013 AMR the contextual changes contributed to the recommendation to review the plan.
- 3.2 As the review of the plan has already been triggered, the contextual changes that may affect the AMR and any policies within the plan will be considered as part of the review process in a comprehensive and holistic way. These contextual considerations will include, but are not exclusive to, the updating of Planning Policy Wales (Feb 2014), the Draft Planning Bill (Dec 2013) and The City Regions regional planning tier.

4 Strategic Environmental Assessment/ Sustainability Appraisal Monitoring

4.1 The Strategic Environmental Assessment Directive requires local authorities to undertake Strategic Environmental Assessment (SEA) of their plans as part of preparation of their LDPs. In addition to this the LDP Regulations require that local authorities undertake Sustainability Appraisal (SA) of their plan. It is now best practice for local authorities to undertake SEA and SA together, as an iterative part of the development plan process throughout plan preparation. In preparing the Adopted LDP the Council undertook joint SEA and SA and produced and published its SEA/SA Report in conjunction with the LDP.

4.2 The SEA Directive also requires that the Council monitor the state of the environment through monitoring the sustainability objectives set out in the SEA/SA Report. The Scoping Report, Part 1 of the SEA/SA Report, sets out a framework consisting of 25 Objectives, which are broken down into 86 Indicators, each with an aspirational target to be reached at the end of the plan period. It should be noted that whilst some Indicators have fixed targets, i.e. a set figure at the end of the plan period, others have moving targets. The Indicators with moving targets are compared against UK or Welsh averages that change annually. For these indicators the targets reflect the change between the differing levels at county borough and UK/Welsh level, rather than the specific figures themselves.

4.3 Given it is only halfway through the plan period, it is unlikely that many, if any, of the targets have actually been achieved. Consequently, just monitoring the Targets will not provide any useful information. The targets have been identified to provide a fixed position against which the indicator movement and trend can be considered. A trend towards the target reflects positive effects, whilst a trend away from the target reflects negative effects.

4.4 To effectively monitor the changes to the environment a strategic approach needs to be adopted and, as a result, the SEA monitoring will be based upon the 25 Objectives. Using the Objectives allows for a more strategic consideration that provides an overall picture of the effect that the plan is having on the environment, whilst taking account of the specific information provided by the Indicators and the potential for Indicators to conflict with one another.

4.5 The SEA monitoring uses the normal 'traffic light' system to identify how the state of the environment is changing during the plan period. However, the notations used in the monitoring have slightly different meanings to those in the SEA Report itself. For monitoring purposes a green result indicates that the overall trend of the Objective is toward its target (positive effect), whilst a red result indicates that the overall trend is away from its target (negative effect) and a white result is a neutral effect (maintaining the status quo). The result for each Objective will be the overall effect when all of the Indicators are taken into account. As outlined above, it is not unusual for Indicators to provide conflicting results and the overall Objective effect will be the net effect when negative and positive indicators have cancelled each other out.

4.6 The normal system of single and double positives and negatives, along with associated colour variations, sets out the scale of effect, with double results representing significant change positively or negatively and single results representing movement, but of a less significant scale. The symbology used in the SEA Monitoring is set out in the table below:

SEA Monitoring Symbology	
XX	Most, if not all, indicators are not moving toward their respective targets
X	There is a mix with some indicators not moving towards targets whilst others are moving toward targets or have not yet moved.

+	There is a mix with some indicators moving towards targets whilst others are not moving toward targets or have not yet moved.
++	Most, if not all, indicators are moving toward their respective targets
O	Some indicators moving towards targets and some not, but when combined they realise a stable balanced position, or no movement in any of the indicators
DNA	The Objective could not be effectively assessed primarily as the indicators require a sequence of results before assessment can be made.
NM	Not Monitored (due to circumstances that mean that data is no longer available).

Table 3 - SEA Monitoring Symbolology

Assessment of the SEA/SA Monitoring

- 4.7 The results of the SEA Monitoring process are set out in Appendix 4 to this report. It should be noted that the monitoring period for the AMR is 1 April 2013 to 31 March 2014 and the findings of the assessment are included in the column headed 2014.
- 4.8 As part of the preparatory work for the first AMR an internal practice run (Dummy Run) was undertaken, covering the period November 1st 2010 to 31 March 2011 (from the month of Adoption to the end of the normal monitoring period). The Dummy Run provides the starting point, or baseline, for the SEA Monitoring and the assessment of the SEA Monitoring considers the current position in relation to the baseline position, with the change being the effect. This assessment will also take account of the results of the 2012 and 2013 SEA monitoring results set out in the 2012 and 2013 AMR Reports.

Changes to the Monitoring Framework

- 4.9 Indicator S6 [Percentage of residents by gender expressing fear of crime whilst walking in neighbourhood] has already been subject of a change because the information collected as part of the Council's Household Survey changed. The original Indicator was omitted from the AMR and was replaced with three separate indicators, namely S6A [The percentage of Residents, whose perceptions of crime and disorder within the county borough, has worsened],

S6B [The percentage of Residents, whose perceptions of crime and disorder within their neighbourhood, has worsened] and S6C [The percentage of Residents, whose perceptions of crime and disorder within their local town centre, has worsened]. The Household Survey information has changed again and the three replacement Indicators have also been omitted from the AMR and have been replaced by two new indicators, namely S6D [The percentage of Residents, whose perceptions of crime has got better in the last 2 years] and S6E [The percentage of Residents, whose perceptions of disorder has got better in the last 2 years].

- 4.10 In addition to this, two further Indicators have been omitted from the AMR due to the fact that there is no longer a requirement to collect the data for Welsh Government, namely S83A [Percentage of Roads (a-class) in poor condition (National performance Indicator)] and S83B [Area of Principal network carriageway (A roads) resurfaced/ surface treated]. There are no further changes to the Monitoring Framework, although a further 9 indicators have not realised results this year due to a lack of information. This means that a total of 15 Indicators do not have information due to a lack of available data. This position will need to be reviewed in the next AMR.

2014 SEA Monitoring Results

- 4.11 None of the Objectives realised double negative results, which would mean that most, if not all, indicators in the Objective were failing. In addition to this only 2 of the Objectives realised single negative results and only 11 of the Indicators realised negative results. These results indicate that the LDP is not raising any significant issues of concern in the SEA Monitoring.
- 4.12 By contrast nine of the Objectives realised single positive results, whilst a further 4 Objectives realised double positive results. The positive results are realised across the range of Objectives encompassing social,

economic and environmental issues. These results indicate that the LDP is having a beneficial effect upon the environment across the Sustainability spectrum. Overall the strong positivity realised by the monitoring indicates a very strong positive effect on the environment.

- 4.13 The results, when compared to previous years show a marked improvement in the position, with significantly more positive results than has previously been identified.

Comparison To Previous Years

- 4.14 The findings of the SEA monitoring will change from year-to-year due to small changes derived from vagaries of development and external factors. Consequently, an overview of the trends and overall picture will provide a more comprehensive and robust analysis of the effects of the LDP than any single year, which effectively will only provide a snapshot picture.
- 4.15 There are four years of AMR results that need to be considered as part of this section, the 2011 Dummy Run, the 2012 and 2013 AMR Report results and this year's results i.e.

2014. Whilst analysis of each set of results can be undertaken against all other sets, the key issues that need to be addressed are changes in respect of this year's results and those of the previous year (representing the yearly change) and those of the starting year (representing plan period change). As a result the analysis in this section undertakes comparisons between the 2014 results with those of the 2013 AMR and the original Dummy Run i.e. the baseline of 2011.

4.16 The first consideration is the number recorded for each type of result. The table below sets out the SEA Monitoring results by result type and year.

Comparison of Effects				
Result	2011	2012	2013	2014
XX	3	0	0	0
X	4	8	5	2
O	2	5	9	7
+	6	6	5	9
++	2	3	3	4
DNA	7	2	1	0
NM	1	1	2	3

Table 4 – Comparison of Effects Results Over Time

4.17 As can be seen from the table, there has been a continued reduction in the severity and incidence of negative effects when compared across the years. By contrast the positive results have strengthened consistently, despite a slight drop in the 2013 results. The key change between the 2011 and 2014 results is that there are, no longer, any Objectives that were not assessed. Conversely there are an increasing number of Objectives and Indicators that no longer have relevant data upon which to monitor them. The factors remain unmonitored and this has now realised 3 complete Objectives that are no longer monitored, with a further 5 Objectives that have less than over half of their component indicators identified as being "Not Monitored". Much of the information that these indicators have been reliant on is from data sources external to the Council, notably Welsh Government and Natural Resource Wales

(NRW) formerly Environment Agency Wales. In these instances information is either not forthcoming, or is no longer collected or updated. This is a trend that is becoming increasingly more important in monitoring the LDP and its SEA/SA and will require significant reconsideration for the LDP review.

4.18 Table 5 sets out the trends of how the Objective results have changed over time. This information is important as it gives an indication of whether the Objective results are constant or whether the results are changing significantly, and if so in which direction.

Effects Changes Over Time				
Change	11-12	12-13	13-14	11-14
Positive To Neutral Changes	2	1	1	3
Neutral to Negative Changes	0	0	1	0
Positive to Negative Changes	1	1	1	1
DNA To Negative Changes	3	1	0	1
Double Positive to Double Negative Changes	0	0	0	0
No Change (Negative)	1	3	0	0
DNA To Neutral Changes	1	0	1	2
No Change (Neutral)	2	4	4	1
DNA To Positive Changes	3	0	0	4
Negative to Neutral Changes	4	4	1	1
Neutral To Positive Changes	0	0	4	1
Negative To Positive Changes	1	1	3	2
Double Negative to Double Positive Changes	0	0	0	1
No Change (Positive)	4	7	6	4

Table 5 – Comparison of Changes In Effects Over Time

5 LDP Policy Monitoring

- 4.19 The table sets out the changes in groups, starting with negative changes (changing to a more negative result) neutral changes and then positive ones. As can be clearly seen from Table 5 the results are becoming increasingly positive over time, in addition a high number of Objectives maintain their overall positive result.
- 4.20 By contrast the number of Objectives moving toward negative results is much lower, with only five Objectives realising more negative results in 2013, compared to 10 realising more positive results. No Objectives retained a negative result, and this is the second consecutive report that has realised this result.
- 4.21 Overall the changes in Objective results accords with the consideration of the numbers of results by type, confirming an increasingly more positive outcome than in previous years.

In Conclusion

- 4.22 The SEA monitoring exercise raises no significant issues that would warrant direct intervention or action. Further to this the 2014 Monitoring results show an improving position, with higher levels of positive results than previous years.

- 5.1 The purpose of the monitoring process is to proactively review whether the policies of the LDP are being implemented and the plan strategy is being delivered. The monitoring of the policies is undertaken through the use of a framework of measures, which has been included in the Adopted LDP (Appendix 19). The Framework consists of 29 Indicators (overarching measures considered against time related targets) and 53 Factors (specific measures considered against a fixed Trigger Point).
- 5.2 This is the third AMR to be prepared in respect of the Caerphilly County Borough Local Development Plan. The second AMR that covered the period 2012-13 triggered the review of the plan and a full review of the plan is now in the process of being undertaken. The review of the plan will look at all of the policies within the plan and the overall plan strategy to see where changes need to be made in line with any contextual changes that may have taken place in the time since the plan was adopted. These will include the social, economic and environmental objectives of the Council and the plan.
- 5.3 The following section will therefore provide an analysis of the success or otherwise of the plan against the monitoring indicators and factors in terms of delivering sustainable development. It will consider how the plan has performed specifically in 2013/14 but also over the plan period. Finally this section will also provide an indication in terms of whether there is a need for the Council to consider any amendments to policy areas that are not delivering as anticipated.
- 5.4 For ease of reference a traffic light system has been used to provide an overview of the progress that is being made in respect of the delivery of each of the Strategy Policies.

Policy Monitoring Traffic Light System	
Result	Meaning
	Policy is being met or exceeded. No intervention required.
	Policy is not delivering as anticipated but is delivering sufficiently and does not require intervention measures.
	Policy is failing to deliver as anticipated and intervention measures should be considered.

Table 6 – Traffic Light System

5.5 The statistical information relating to each of the Indicators and factors is set out in the Annual Monitoring Report Statistical Tables. These tables do not form part of the Annual Monitoring Report and as a result they are not included in it.

Strategy Policies – 2013/14

5.6 An overview of the LDP Monitoring Data for the third AMR period provides an interesting insight into the implementation of the LDP over the past 12 months. Of particular note for 2013/14 is the following:

- The annual house-building rate decreased slightly over the period from 390 to 344 dwellings in the previous year.
- The housing land supply figure decreased from 3.5 to 2.9 years using the Welsh Government preferred residual method.
- The average house price fell from £97,272 to £94,272.
- Unemployment fell from 9% to 8.4%.
- The number of residents in employment increased from 73,700 to 78,700.
- There was a general drop in commuting rates as a percentage of all commuting both in terms of out commuting for work, but a slight rise in out commuting generally from 45.9% to 50%.

- Vacancy rates in the Principal Towns of Caerphilly and Risca/Pontymister decreased over the period whereas vacancy rates in, Blackwood, Bargoed increased. Vacancy rates in Ystrad Mynach remained the same.
- Footfall in the Principal Town Centres declined by 19.48%, a significant increase from the previous years figure of 7.38%
- The number of schools over subscribed in terms of the school rolls increased from 4 to 5.
- The use of aggregates within the construction industry continued to fall.
- The amount of new development on brownfield sites increased.

Strategy Policies - Overall Progress

5.7 A summary of the performance of each of the Strategy Policies is indicated in Table 7 below

Strategic Policy Delivery		
SP1	Development in the HOVRA	
SP2	Development in the NCC	
SP3	Development in the SCC	
SP4	Settlement Strategy	
SP5	Settlement Boundaries	
SP6	Place Making	
SP7	Planning Obligations	
SP8	Minerals Safeguarding	
SP9	Waste Management	
SP10	Conservation of Natural Heritage	
SP11	Countryside Recreation	
SP12	Development of the Valleys Regional Park	
SP13	Leisure Centre in the HOVRA	
SP14	Total Housing Requirements	
SP15	Affordable Housing Target	
SP16	Managing Employment Growth	
SP17	Promoting Commercial Development	
SP18	Protection of the Strategic Leisure Network	

SP19	Transport Infrastructure Improvement	
SP20	Road Hierarchy	
SP21	Parking Standards	
SP22	Community, Leisure and Education Facilities	

Table 7 – Strategic Policy Delivery

SP1 Development in the Heads of the Valleys Regeneration Area

- 5.8 In the HOVRA the Strategy seeks to exploit appropriate development opportunities where they exist in order to create viable communities and address existing problems of deprivation in a manner that is consistent with the principles of sustainable development. It further seeks to promote the north of the County Borough as a tourist, employment and residential area in the heart of the valleys city region.
- 5.9 One of the main aims of the strategy in the HOVRA is to reverse the long-term trend of population decline in the area. The 2011 Census indicates that this has been achieved with the population increasing slightly from 30,626 in 2001 to 31,087 in 2011.
- 5.10 The one area that remains of concern however is the failure to diversify the housing stock within the area. One of the key characteristics of the current housing market realignment has been the tendency for buyers (whether private home buyers, investors or developers) to seek out the more secure prime market opportunities and avoid less certain or established market opportunities (unless there is a significant and discernible price incentive). This trend is something that is expected to continue until the UK economy and housing market enjoys a period of strong and sustained growth.
- 5.11 Low land values and issues of viability continue to be a major issue for residential development schemes within the HOVRA. It is evident that the delivery of housing in the HOVRA has remained consistently low with

no significant improvement in delivery both in terms of number of units or as a proportion of total housing delivery across all strategy areas.

- 5.12 The development industry continues to consider the land in the HOVRA as currently economically unviable to develop. This is due to the fact that new development in this area would not realise the sales values necessary to cover build costs and generate a viable land value or commercial return to justify the capital investment necessary to take forward a scheme in this area. The development of sites in this area has therefore been primarily local builders, with little developer interest from national house builders. Little progress has been made therefore in terms of diversifying the housing stock in this area.
- 5.13 The major success in HOVRA to date has been the transformation of Bargoed as the Principal Town for the area. This work continues apace and is truly transformational. A number of initiatives have already been completed in the town centre including the conversion of the Hanbury Baptist Chapel into a multi purpose community asset comprising housing, a worship space, library and resource centre. Morrison's now occupies the plateau site and the retail vacancy rate in Bargoed has fallen from 16% in 2011 to 7.8% in 2013.

SP2 Development in the Northern Connections Corridor

- 5.14 In the NCC the Strategy seeks to capitalise on the development opportunities in the Principal Towns of Blackwood and Ystrad Mynach and the economic opportunities offered by Oakdale Business Park. New development opportunities are focussed on both brownfield and greenfield sites that have good public transport links to encourage travel by sustainable modes and which make the most efficient use of existing infrastructure.
- 5.15 There has been considerable success in redeveloping brownfield sites in the NCC,

which exploit the existing infrastructure. However there has been a disappointing take up of employment land across this area and significant land remains available within the NCC for employment at Ty Du, Nelson and Oakdale Business Park. Both of these sites are in public ownership and are actively being promoted.

- 5.16 Phase 1 of the council's secondary rationalisation plans have been announced with plans to build a new state-of-the-art secondary school as part of the authority's ambitious 21st Century Schools programme in the 'Islwyn West' area. There are currently proposals under consultation regarding the use of Oakdale Plateau 3 for a new secondary school. The proposal will help reduce the amount of surplus places in the area from 22.1% to 16.9%.
- 5.17 Both Principal Towns within the NCC have experienced mixed fortunes in respect of vacancy rates between 2011 and 2013. Ystrad Mynach has fallen from 13% to 8% whilst Blackwood has after initially falling from 9.3% to 8.5% between 2011 and 2012 has risen again to 9.6% in the period between 2012 and 2013. The Blackwood Gate Retail

Warehouse Park, which has remained vacant for a long period of time, is now attracting retailers. Pound Stretcher and Home Bargains (recently opened June 2014) occupy two of the units and it will be interesting to monitor how this impacts on vacancy rates in the town over the coming year.

- 5.18 The development strategy for the NCC remains valid. There will be a need however to identify new sites in sustainable locations for housing on both brownfield and greenfield land within the NCC through the first review of the plan.

SP3 Development in the Southern Connections Corridor

- 5.16 In the SCC the objectives are to consolidate development within settlement boundaries on brownfield land and make the most efficient use of existing infrastructure in the interests of the environment and the principles of sustainable development.
- 5.20 There are two Principal Towns within the SCC. Vacancy rates in Caerphilly have fallen from 16% in 2011 to 7.8% in 2013, whilst in Risca/Pontymister they have remained at 9% over the period.
- 5.21 One of the key characteristics of the current housing market realignment has been the tendency for investors to seek out the more secure prime market opportunities. Locally, Caerphilly Basin is the area that continues to be attractive to the housing industry and

generally attracts the highest land values in the county borough. As a consequence the development strategy for the SCC has been generally successful in terms of consolidating development to within settlement boundaries on brownfield land.

- 5.22 There has been limited success in securing the target of 40% affordable housing through the planning system within the Caerphilly Basin, whereas in Lower Islwyn where the target is 10% there has been more success. There continues to be a significant need for affordable housing within the SCC. The current economic climate means that viability continues to be an issue for new development schemes within the SCC particularly where this is proposed on brownfield land.
- 5.23 Bedwas Colliery is the largest allocated brownfield site remaining in the SCC. At 23ha it is capable of accommodating approximately 630 dwellings. The Ness Tar Site is the largest unallocated site at 12ha. The costs associated with the remediation of both of these sites remain potentially prohibitive in the current economic climate. The Council is actively exploring options to unlock the development potential of the Bedwas Colliery Site as this is an allocated site and is open to discussions concerning the development potential of the Ness Tar Site. However it is acknowledged that neither of these sites is likely to be delivered in the short to medium term.
- 5.24 The Council has operated a consolidation strategy for the Caerphilly Basin since 2006. This Strategy has been extremely effective at bringing brownfield sites back into beneficial use, and as a consequence there are now very few brownfield sites available. Therefore the release of greenfield sites within the SCC and in Caerphilly Basin in particular, will need to be given serious consideration through the first review of the plan.

SP4 - Settlement Strategy / SP5 - Settlement Boundaries

- 5.25 Settlement boundaries are a key mechanism for achieving resource efficient settlements and to provide an indication where development will be permitted. The delineation of settlement boundaries across the county borough is determined by the functional analysis of the strategy areas and the specific role and function of individual settlements.
- 5.26 The settlement boundary policy is proving to be an extremely effective mechanism for ensuring that new development promotes the effective use of urban land, concentrates development within settlements and prevents inappropriate development in the countryside. No intervention required.

SP6 - Place Making

- 5.27 As an integral part of the development management process Policy SP6 Place Making provides the strategic policy framework to ensure that sustainable places are created that are socially cohesive, enhance quality of life, meet the needs of current and future residents and reflect the role and function of settlements. The promotion of good design, sustainable transport, resource efficiency and the enhancement of natural heritage all contribute to development that encourages a sense of place and identity.
- 5.28 In order to set out more detailed guidance on the implementation of Policy SP6 the Council has prepared Supplementary Planning Guidance (SPG), which provides detail in respect of how this policy, together with specific county wide policies will be implemented in key areas as follows: LDP4: Trees & Development; LDP 5: Car Parking Standards; LDP6: Building Better Places to Live; LDP7: Householder Development; LDP8: Protection of Open Space; LDP10: Buildings in the Countryside; and LDP12: Shop fronts and Advertisements.

5.29 Applications are considered in accordance with national and local policies and with SPG and collectively these are proving effective in raising the standard of new development being approved throughout the county borough. No intervention required.

SP7 - Planning Obligations

5.30 New development has the potential to increase pressure on existing community infrastructure and facilities. The provision of adequate infrastructure and services are a prerequisite of development taking place. In line with national guidance and Policy SP7 the Council negotiates obligations to remove obstacles to planned development.

5.31 To this end as an integral part of the development management process Policy SP7 Planning Obligations provides the strategic policy framework for planning obligations to be sought to facilitate the provision of infrastructure and services. The Council has prepared Supplementary Planning Guidance (SPG) to provide detailed guidance to provide certainty to the development industry in respect of three key areas as follows: LDP1 Affordable Housing Obligations; LDP2 Education Obligations; and LDP3 Caerphilly Basin Highway Obligation. (Note: LDP2 and LDP 3 were superseded by the introduction of the Community Infrastructure Levy on 1st July 2014).

5.32 Whilst Policy SP7 provides the strategic context for planning obligations, it recognises that the level of the obligations sought may affect development viability. The reasoned justification to the policy therefore makes provision for developers to provide evidence to the Council on viability as part of the negotiation process. This has proven to be extremely important in terms of ensuring that the LDP has sufficient flexibility to reflect changing economic circumstances. Viability continues to be a major issue across the county borough, as land values have significantly decreased since the crash of 2008. Policy SP7 and its reasoned justification

provides a key mechanism by which the viability of obligations can be taken into account when considering development proposals.

5.33 The Community Infrastructure Levy (CIL) was introduced in the county borough as from 1st July 2014. CIL is a new charging system that can be applied to most forms of development to fund infrastructure improvements that support the development of the area in accordance with the Local Development Plan. CIL is not intended to replace S106 obligations; it will however subsume a lot of the matters and issues that are currently addressed through S106 obligations, which are presently indicated in Policy SP7. There will be a need therefore to review the provisions of Policy SP7 to remove infrastructure that is to be provided through CIL.

SP8 - Minerals Safeguarding

5.34 The county borough has a more than sufficient aggregates landbank and permitted reserves to meet the identified needs for the area contained in the South Wales Regional Technical Statement to cover the remaining period of the LDP. Consequently monitoring indicates that the Council continues to meet its objectives of contributing to regional demand and therefore in this respect Policy SP8 is proving to be effective. No intervention required.

SP9 - Waste Management

5.35 Policy SP9 identifies all protected B2 industrial sites as potentially suitable locations for new in-building waste management facilities and identifies the Area of Search Maps contained within the Regional Waste Plan as appropriate advice when seeking sites for in-building and open air facilities.

5.36 Ten planning applications have been approved since the adoption of the LDP for waste related uses including new buildings to collect, sort, grade, process and redistribute

ferrous and non ferrous materials and for the storage of wood and wood pellets. All of the proposed schemes are based on existing industrial sites or are extensions to existing waste sites or civic amenity sites, which would indicate that Policy SP9 is being successful in terms of directing waste facilities to appropriate locations. No intervention required.

SP10 - Conservation of Natural Heritage

- 5.34 Whilst change is inevitable and opportunities for growth and development need to be provided, respecting the unique and distinctive features of the characteristics of the natural heritage of the county borough is essential in both the natural and built environment.
- 5.38 The statutory designations such as the SSSI's and the SAC have seen no loss of land through development during the plan period. This is not unexpected as the designations do afford a significant level of protection that would normally only see development allowed in exceptional circumstances.
- 5.39 Policy SP10 provides the policy framework and development criteria for proposals that affect locally designated natural heritage features, namely Special Landscape Areas, Visually Important Local Landscapes, Sites of Importance for Nature Conservation, Local Nature Reserves, Regionally Important Geological Sites, Green Corridors and Local Priority Habitats and Species.
- 5.40 Currently the monitoring of the plan indicates that the policies of the plan are not always protecting areas successfully. The number of applications that are resulting in the loss of areas of natural heritage is increasing annually. However, the figure is negligible and on balance the Policy is generally affording protection to those areas that are valued at the local level. No intervention required.

SP11 - Countryside Recreation

- 5.41 Monitoring indicates that there was a marked increase in both visitor numbers and customer satisfaction with the countryside recreation on offer in the county borough.
- 5.42 Current visitor numbers for sites are based on a Park Manager assessment in addition to data collected through remote collection; including traffic and pedestrian counters. It is estimated that in excess of 812,163 people visited facilities during the monitoring period an increase of 183,944 people on the previous year and a total of 215,838 since the monitoring of the plan began.
- 5.43 Customer satisfaction with the countryside recreation facilities also was encouraging. This is based upon a rolling survey (surveying each venue in turn each year), which provides updated information every year compared against a baseline satisfaction of 54%. Significantly customer satisfaction has increased from 78% in 2011/12 to 83% over the current monitoring period. Taken together these Factors provide a good gauge in terms of the enjoyment being realised by residents in the countryside. No intervention required.

SP12 - Development of the Valleys Regional Park

- 5.44 The development of the Valleys Regional Park provides a key opportunity to attract tourist and investment to the county borough. Ongoing commitment to the development and maintenance of the existing country parks in the area is therefore critical. The Council continues to support and manage the existing parks throughout the county borough and improve upon the facilities within them whenever appropriate, and as and when funding becomes available. Currently, whilst there is an ongoing commitment to the development of Bedwas Community Park in the south of the county borough, there is no funding to progress this work. No intervention required.

SP13 - Leisure Centre in the HOVRA

5.45 The Council continues to have aspirations to improve the County Borough's strategic leisure infrastructure particularly within the HOVRA. To date no provision has been made for a new leisure centre within the HOVRA. Given the current economic climate a decision should be taken at the first review as to whether this policy remains deliverable.

SP14 - Total Housing Requirements

5.46 Whilst Monitoring indicates that no trigger points for housing completions have been reached, it is evident that new housing has not been delivered at the levels required in the first half of the plan period. Policy SP14 indicates that there is a housing requirement for 8625 new dwellings to be delivered to meet identified need over the plan period. In order to meet this need an average of 575 dwellings needs to be delivered per annum.

To date 3287 units have been delivered (38% of the total housing requirement).

5.47 It is acknowledged however that a 15-year plan period will contain periods of boom and bust so it is important to consider this position alongside other factors such as forecast completions for the next five years. The 2012 Joint Housing Land Availability Study (JHLAS) indicates that future completion rates are likely to continue at a lower rate averaging 442 units per annum, compared to the expected average annual requirement figure of 575. This is clearly a matter for concern, as on current predictions only 5152 dwellings will be delivered by 2017 compared to an anticipated delivery of 6,325 dwellings. If this trend continues for the remainder of the plan period there is a very real danger that insufficient housing will be delivered to meet the needs of the resident population.

- 5.48 Given the significance of housing to people and the economy the requirement to maintain a 5-year supply of land for housing is set out in national planning policy and guidance and is a mandatory national indicator as well as being an AMR indicator.
- 5.49 The 2010/11, 2011/12 and 2012/13 JHLAS indicate that using the methodology prescribed in guidance that the 5-year land supply in Caerphilly county borough has been 4.3 years, 3.5 years and 2.9 years respectively. Where the land supply is less than 5 years, Technical Advice Note 1: Joint Housing Land Availability Studies states that local authorities must take steps to increase the supply of housing land. Options include reviewing the development plan, releasing land in its ownership, expediting planning applications or securing the provision of infrastructure for particular sites.
- 5.50 The lack of a five-year land supply is a matter of concern that needs to be addressed, as the evidence available indicates that it is unlikely that this position will improve in the next few years. There could be a need to release limited greenfield sites in the short term to address the supply issue. The first review of the LDP will further address the land supply issue through the allocation of sites that are capable of being delivered in viable parts of the county borough.

SP15 - Affordable Housing Target

- 5.48 Affordable housing through the planning system is not being delivered at the rates required at this point in the plan period. This

is unsurprising given that housing generally is not being delivered at expected rates. The downturn in the economy has had a marked effect on house building rates and therefore on the delivery of affordable housing. Viability continues to be a major issue in overall house building and this has an adverse impact on the levels of affordable housing that can be delivered through the planning system.

- 5.52 A significant number of affordable units are being delivered through other mechanisms and this has ensured that on many sites mixed communities are being delivered. However, there is a heavy reliance on capital grant funding for this aspect of delivery and if/when the availability of funding is reduced, this will significantly affect affordable housing delivery in the future.
- 5.53 The overall targets for affordable housing set out in Policy SP15 are unlikely to be achieved given the ongoing viability issues and potential reduction of capital grant funding. This is particularly the case where provision is reliant on the planning system and sites have significant constraints that impact on their viability. One way of potentially increasing affordable housing therefore, would be to explore the opportunity of releasing greenfield sites for development in areas which might realise higher land values. This issue will be addressed through the first review of the LDP.

SP16 - Managing Employment Growth

- 5.51 In terms of general economic trends, there has been little change over the monitoring period, although what movement there has been has been generally favourable. Both unemployment and economic inactivity have continued to reduce and out-commuting has decreased, which suggests that fewer people need to travel beyond the County

Borough for work. Although job density has fallen, this coincides with the large increase in the population as indicated by the 2011 Census. Thus the declining density could be associated with the population increase rather than with a decline in the number of residents in employment.

5.55 There has been very little activity in terms of new development on the land allocated for employment use in the LDP. The LDP allocates 101ha for employment use and to date 17.73ha has been delivered. There is a need to review the sites and their distribution in order to ensure that those sites that are allocated continue to reflect the needs of the business sector.

5.56 At present the LDP protects 475 ha of existing employment land from alternative forms of development. However many of the existing industrial sites accommodate large, outdated industrial units that do not meet modern day needs. Evidence suggests that sites that contain smaller, more modern units that are more relevant to SME development and business start-ups, generally enjoy good occupancy rates and that there is level of demand for such premises in the county borough. Consideration should be given as to whether a greater emphasis on protecting and allocating sites for employment of this nature at the local level would represent a more effective approach to managing employment growth in the county borough. The plan is now under review and a decision will need to be taken in terms of the amount and distribution of employment sites that should continue to be afforded protection.

5.57 The categorisation of sites as Business, Primary and Secondary Estates should be examined to establish if this categorisation is stifling economic growth. The policy is devised as a means of steering different activities to appropriate sites, however it also prevents certain forms of development from locating on specific sites. For instance, the location of employment-generating uses such as retail, pubs and restaurants on primary

and secondary sites (the category employing the greatest level of flexibility) is presently contrary to policy under the provisions of CW13, despite enquiries and applications to this effect.

5.58 The changing emerging emphasis in National Planning Policy will require closer collaboration between LPAs in terms preparing a regional evidence base and establishing a common approach with regard to employment land. This should be integral to the review of the LDP, particularly in terms of identifying strategic employment sites.

5.59 The lack of development activity on land allocated for employment and the high vacancy rates on existing estates are matters of serious concern given the importance of this type of development for jobs and the economy. However it is important to recognise that Wales is still experiencing a prolonged and gradual realignment of the economy and the levels of growth employment anticipated at the start of the plan period are likely to take longer to deliver than originally envisaged. Nevertheless a reassessment of current policy, existing sites and land allocations to ensure that they are meeting the needs of the business sector might be the most appropriate way forward to facilitate economic recovery and stimulate economic growth.

SP17 - Promoting Commercial Development

5.60 The LDP identifies 5 Principal Town Centres comprising three commercial opportunity areas, 4 Local Centres and 2 Retail Warehouse Parks, setting out the Council's retail hierarchy. The Principal Towns are the higher service centres, whilst the Local Centres are predominantly retail based. The Retail Warehouse Parks should be developed in preference to other edge of centre locations.

5.61 In recognition of the importance of the commercial sector for employment the LDP makes provision through Policy SP17 for the development of 29.3 hectares of commercial development. This is distributed throughout the principal town centres, local centres and on two retail warehouse parks. Significant progress has been made in delivering commercial development on these sites, and to date 17 ha of land has been developed for commercial use. No intervention required.

SP18 - Protection of Strategic Leisure Network

5.62 Policy SP18 seeks to protect important networks of public open space, natural green space and recreational facilities from inappropriate development. Monitoring indicates that the suite of policies that provide this protection are performing well and whilst there has been some loss of open space this has been limited. No intervention required.

SP19 - Transport Infrastructure Improvement

5.63 The transport network plays a critical role in improving accessibility to employment opportunities, to shopping centres and to community and other facilities. Transport Infrastructure improvements advocated in the plan aim to encourage greater use of public transport, walking and cycling as alternatives to the car. The Strategy aims to continue to provide an efficient transport system whilst moving towards a more sustainable resource-efficient settlement pattern and transport system across the county borough. There has been significant progress made to date as outlined below.

5.64 Significant improvement has been made to the railway network with the establishment of the Ebbw Valley rail line, new and improved park and ride facilities and the introduction of new stations. There continues to be a need to introduce additional stations on the network.

5.65 Whilst monitoring suggests that out commuting for work has declined in percentage terms the actual number of

people commuting out of the county borough has increased and continues to increase. This is an issue that needs to be addressed.

5.66 There has been relative success in securing funding for cycleway proposals throughout the county borough

5.67 The air quality generally in the County Borough is good, however there are two designated Air Quality Management Area (AQMA) within the county borough in Caerphilly Town Centre and in Hafodyrynys. An in-depth study of the air quality within the Caerphilly AQMA has been undertaken to look at all possible sources that contribute to poor air quality within the area and quantify their contribution. This work indicated that traffic movement within the area, has an adverse impact on air quality and this is likely to also be the case in Hafodyrynys. Measures are being explored to address this issue and any land use implications arising from this work will need to be incorporated into the LDP through the review process, the most significant issue is the need, or otherwise, for a south east bypass for Caerphilly. No intervention required.

SP20 - Road Hierarchy

5.68 The identification of a road hierarchy within the LDP serves to ensure the efficient use of the highway network by ensuring that traffic is channelled onto the most appropriate routes in order to maintain appropriate environmental, amenity and safety conditions. Appendix 16 of the LDP contains policy advice on the restrictions that will apply to the various routes and further identifies the status of the main routes within the county borough. Since adoption, the Council has designated four additional routes and these should now be included in the road hierarchy. It is proposed that the actual lists of roads in the various categories of the hierarchy should be removed from the LDP and put in Supplementary Planning Guidance instead, which has much less onerous

requirements for amendment and updating. Notwithstanding this matter the policy is clearly being successful in channelling traffic to the most appropriate routes. No intervention required.

SP21 - Parking Standards

5.69 The application of parking standards enables a transparent and consistent approach to the provision of parking facilities associated with new development and change of use. The Council have prepared and adopted LDP5 Car Parking Standards, which identifies how the CSS Wales – Wales Parking Standards 2008 is to be applied across the county borough. As a consequence of the introduction of this guidance 15% of eligible planning applications are realising reductions in car-parking requirements due to sustainability factors. No intervention required.

SP22 - Community, Leisure and Education Facilities

5.70 Caerphilly county borough schools are set to receive £92m to fund ambitious plans for education in the area. The Welsh Government is providing £46m, which is being matched by the Council. It is expected that the funding will be made available over a seven-year period from 2014. As indicated previously the proposed secondary rationalisation will require the Council to identify suitable sites for new schools which will be addressed through the review of the LDP in the short term.

The Consideration of Identified Policies

5.71 As a full review of the Adopted LDP is now under way, all of the policies will be reviewed in light of monitoring information and to reflect any changes in national policy since the plan was adopted in 2010.

5.72 It is important to note that the following policies were triggered in previous AMR:

- Policy SP3 Development Strategy SCC
- Policy SP8 Minerals Safeguarding
- Policy SP10 Conservation of Natural Heritage

- Policy SP15 Affordable Housing Targets
- Policy SP17 Promoting Commercial Development
- Policy SP18 Protection Of The Strategic Leisure Network
- Policy SP20 Road Hierarchy

given the ongoing viability issues and potential reduction of capital grant funding. This is particularly the case where provision is reliant on the planning system and sites have significant constraints that impact on their viability. One way of potentially increasing affordable housing therefore, would be to explore the opportunity of releasing greenfield sites for development in areas which might realise higher land values. This issue will be addressed through the first review of the LDP.

5.73 Monitoring of the plan for 2013/14 indicates that no new Strategy Policies have been triggered. No intervention is necessary at this time, as all policies will be reassessed as an integral part of the LDP Review. There is however a need to consider the following key policies as part of the 2014 AMR:

5.78 No further intervention is necessary at this time, as all policies will be reassessed as an integral part of the First Review of the LDP.

SP14 - Total Housing Requirements

SP15 Affordable Housing Target

5.74 The 2012/13 JHLAS indicates that the housing land supply has fallen to 2.9 years using the residual method. Where the land supply is less than 5 years, TAN 1 states that local authorities must take steps to increase the supply of housing land. This may include reviewing the development plan, releasing land in its ownership, expediting planning applications or securing the provision of infrastructure for particular sites.

5.75 The full review of the Adopted LDP has begun and this will look in-depth at the identification of additional development land to satisfy the 5-year land supply requirements of TAN1. However there could be a need to release limited greenfield sites in the short term to address the supply issue.

5.76 In the intervening period the Council should seek to release housing land in its control to the market and should ensure that planning applications are expedited as far as is practical to make land readily available for development.

5.77 The overall targets for affordable housing set out in Policy SP15 are unlikely to be achieved

6 Mandatory Indicators

- 6.1 The LDP Regulations require that the AMR sets out information in respect of housing delivery in the County Borough since the Adoption of the plan. In particular the Regulations require that the AMR Include:
- The housing land supply taken from the current Housing Land Availability Study; and
 - The number (if any) of net affordable and general market dwellings built in the LPA's area

In addition, the Regulations also require that the information be provided for the period in respect of which the AMR is made; and the period since the LDP was first adopted or approved. This information is set out in Table 8 below.

- for a 5 year land supply the quantity of land agreed to be genuinely available should be compared with the remaining provision in the adopted plan, this method of calculating land supply is referred to as the residual method.
- 6.4 The 2011/12 and 2012/13 JHLAS indicate that land supply has been 3.5 years and 2.9 years respectively using the residual method. Where the land supply is less than 5 years, TAN 1 states that local authorities must take steps to increase the supply of housing land. The review of the adopted LDP has begun and this will look in-depth at the identification of additional development land to satisfy the 5-year land supply requirements of TAN1.

New Dwelling Completions Private /Affordable Split and Housing land Supply								
	2007 JHLAS Apr 06- Mar 07	2008 JHLAS Apr 07- Mar 08	2009 JHLAS Apr 08- Mar 09	2010 JHLAS Apr 09- Mar 10	2011 JHLAS Apr 10- Mar 11	2012 JHLAS Apr 11- Mar 12	2013 JHLAS Apr 12- Mar 13	Total
Private Sector	835	554	265	189	241	275	236	2595

Figures taken from Joint Housing Land Availability Studies

* Figures realised under the Caerphilly UDP (LDP Adopted November 2010)

Table 8 – New Dwelling Completions and Housing Land Supply

- 6.2 Housing land availability information is monitored for the period April to end of March annually through the Joint Housing Land Availability Study (JHLAS).
- 6.3 As part of this process there is a requirement set out in Technical Advice Note 1 (TAN 1) to maintain a 5-year land supply. This is therefore, a mandatory indicator M1 and also a local indicator L48. To meet the requirement
- 6.5 Paragraph 9.5.4 of the LDP Manual sets out the above two mandatory indicators, and also sets out a further 10 indicators that are required to be included in the AMR. These indicators are:
- The net employment land supply/ development (ha/sq m.);
 - The amount of development, including

housing, permitted on allocated sites in the development plan as a % of development plan allocations and as % of total development permitted (ha and units);

- The average density of housing development permitted on allocated development plan sites;
- The amount of new development (ha) permitted on previously developed land (brownfield redevelopment and conversions) expressed as a percentage of all development permitted;
- The amount of major retail, office and leisure development (sq m) permitted in town centres expressed as a percentage of all major development permitted (TAN 4);
- The amount of development (by TAN 15 paragraph 5.1 development category) permitted in C1 and C2 floodplain areas not meeting all TAN 15 tests (paragraph 6.2 i-v);
- The amount of greenfield and open space lost to development (ha) which is not allocated in the development plan;
- The amount of waste management capacity permitted expressed as a percentage of the total capacity required, as identified within the Regional Waste Plan (TAN 21);
- The extent of primary land-won aggregates permitted in accordance with the Regional Technical Statement for Aggregates expressed as a percentage of the total capacity required as identified in the Regional Technical Statement (MTAN);
- The capacity of Renewable Energy developments (MW) installed inside Strategic Search Areas by type (TAN 8).

6.7 All of these indicators, along with their respective information, are set out in Appendix 5 of this report.

6.8 Neither the LDP Regulations nor the LDP Manual set out a requirement to analyse the information set out in respect of the mandatory indicators. It should also be noted that all of the information required by these indicators is already included within the indicators set out in the SEA Monitoring Framework and the LDP Monitoring Framework. These indicators inform the policy analysis of the AMR and, as such, this information is already subject to consideration as part of the monitoring process. It is not, therefore, considered appropriate to analyse or consider the mandatory indicators further in this report.

7 Conclusions and Recommendations

7.1 Paragraph 4.43 of LDP Wales sets out seven questions that the AMR must seek to address. Whilst all of the issues are considered and addressed throughout the report as part of the analysis of the monitoring data, they are not set out specifically to directly address the particular questions. In order to ensure that the AMR complies with its statutory requirements, it is appropriate to set out the conclusion and recommendations to directly respond to the seven questions.

Does the basic Strategy remain sound?

- 7.2 The evidence collected through the AMR process indicates that:
- The development strategy for the HOVRA is generally proving successful. The major success in HOVRA to date has been the transformation of Bargoed as the Principal Town for the area. The one area that remains of concern however is the failure to diversify the housing stock within the area.
 - The development strategy for the NCC remains sound, however there will be a need to identify new sites in sustainable locations for housing on both brownfield and greenfield land at the first review of the plan: and

- The development strategy for the SCC has been extremely effective at bringing brownfield sites back into beneficial use, and as a consequence very few brownfield sites remain available for development in the Caerphilly Basin. Bedwas Colliery and Waterloo (Cray Valley) remain undeveloped for various reasons, with little apparent prospect of them coming forward in the short term. In the Risca area a number of brownfield sites remain available and there is a likelihood that these will come forward further to completion of the flood alleviation scheme.

7.3 The evidence collected through the AMR process indicates that the basic strategy has been effective. However given the success of the consolidation strategy in the Caerphilly Basin, the release of appropriate greenfield sites within this area should be given serious

consideration through the first review of the plan. Notably this will require the Preferred Strategy to be reconsidered.

What impact the policies are having Globally, Nationally, Regionally and Locally?

- 7.4 Globally the SEA Monitoring identifies a general positive change in the environment, whilst the LDP policy framework is contributing toward meeting sustainable development targets.
- 7.5 Nationally the LDP policy framework is delivering development to meet national requirements and projections.
- 7.6 The LDP is assisting in meeting regional objectives through site delivery and policy implementation, whilst locally policy intervention and allocation delivery assist with regeneration and meeting local social and economic need.

7.7 As outlined in Chapter 4 the SA/ SEA monitoring found the overall effects of the plan on sustainability and the environment to be realising a positive effect on the socio-economic and environmental well being of the county borough.

Do any policies need changing to reflect changes in National Policy?

7.8 There were no significant changes in national policy or legislation during 2013-14 that directly affect the implementation of the LDP. A number of existing documents have been updated in this period such as Planning Policy Wales, Edition 6, February 2014. These updates will need to be taken into account during the review of the plan.

7.9 If recommendations regarding the introduction of a regional planning tier are taken forward in the Planning White Paper, some matters such as housing numbers, transport infrastructure and the location of strategic employment sites will in future be determined regionally.

Are the policies and related targets being met or is progress being made towards meeting them (including publication of relevant SPG)?

7.10 Information collected through the AMR process indicates that the plan policies are generally being met and that the plan is moving towards its related targets. In terms of LDP policy, no new strategy policies have been triggered for consideration.

7.11 The LDP allocations are being delivered and are contributing toward the delivery of the LDP Strategy. The status of all of the LDP allocations is set out in Appendix 6 of this document.

7.12 Chapter 4 sets out the results of the SA/SEA monitoring process, which concludes that an overall positive effect has been realised. The only note of caution is that the findings of the SEA/SA monitoring reflect a short-term

position and a longer period will need to be considered for a real pattern to be confirmed.

7.13 The Council has approved 10 pieces of Supplementary Planning Guidance. These are listed at Appendix 7.

Where progress has not been made, what are the reasons for this and what knock on effects does this have?

7.14 This is the third AMR to be prepared in respect of the Caerphilly County Borough Local Development Plan, and significantly the first review of the plan is now underway, with a planned examination date of 2017.

7.15 Section 5 provides a detailed analysis of the success of the plan to date against the monitoring indicators and factors in terms of delivering sustainable development. It also provides a summary of how the plan has performed specifically in 2013/14.

7.16 The findings of the SA/SEA monitoring exercise are outlined in Section 4 of the AMR. The results indicate that overall, the plan is travelling in a positive direction.

Do any aspects of the LDP need adjusting or replacing because they are not working as intended or are not achieving the Objectives of the Strategy and/or Sustainable Development Objectives?

7.17 It is important to note that the 2013 AMR has already triggered the first review of the LDP as a consequence of its findings. These issues remain the same for the 2014 AMR. Notably whilst the LDP Development Strategy remains sound, the downturn in the economy continues to have a marked effect on house building rates in the county borough. Viability continues to be an issue in overall house building and this has an adverse impact on the levels of affordable housing being delivered through the planning system. Whilst there is a considerable amount of land identified in the LDP for housing, a number of these available sites are located in the HOVRA

where the development industry is reluctant to develop. Conversely within more buoyant market areas specifically the Caerphilly Basin, very little brownfield land is now available for redevelopment.

- 7.18 The lack of a five-year housing land supply is a matter of concern that needs to be addressed if the overall housing requirement is to be met over the plan period. The monitoring evidence indicates that it is unlikely that this position will improve in the short term and there could be a need to release limited greenfield sites in the short term to address the supply issue.
- 7.19 Furthermore, the provision of 41,000 dwellings, including 18,000 on greenfield sites in north Cardiff through the Cardiff LDP has the potential to attract volume house builders into Cardiff and away from neighbouring areas, such as Caerphilly. This is particularly pertinent to Caerphilly Basin where there is a brownfield strategy.
- 7.20 As indicated in the 2013 AMR, there is an urgent need to identify suitable sites for new schools as a consequence of the Council's ambitious school rationalisation programme. The need to identify suitable sites for new schools, coupled with the need for the implementation of a sustainable approach to education provision requires consideration through the review of the LDP.

Recommendations

- R1** The 2014 Annual Monitoring Plan has indicated that substantial progress has been made in implementing the Caerphilly County Borough Local Development Plan up to 2021 and that the Development Strategy is being effective.
- R2** That limited greenfield release be considered on sites that are acceptable in planning terms in order to address the lack of a five year land supply in the short term.
- R3** That the First Review of the Caerphilly County Borough Local Development Plan continue to be progressed in line with the Welsh Government and Council Agreed Delivery Agreement (13 February 2014).

Appendix 1 - Glossary of Terms used in the Monitoring Framework

Objective	This represents the overall purpose of the policy and is taken from the 'Target' field in Appendix 19 of the LDP.
Indicator	This is the primary and overarching factor against which the policy will be monitored. The Indicator is taken directly from the 'Indicators' field in Appendix 19 of the LDP and will be considered against the relevant Monitoring Target.
Monitoring Aim	Sets out the end of the plan period position, as if the policy has been implemented as intended (i.e. achieving anticipated outcomes not more positive or negative ones). This acts as an overall base level for the effectiveness of the policy, although it is not realistically monitored as it is set at the end of the plan period and could never be reached as the plan would be required to undergo review after a fourth year following adoption.
Source Data	This identifies the data set that will be used to provide the statistical input to the monitoring item. Where the data source is external to the council, and is available via the internet, relevant hyperlinks to the data will be identified.
Monitoring Target	This provides "stepping stone" targets for the Indicator to monitor policy progress. The Monitoring Target is split into two parts, firstly a time factor and secondly the level that is anticipated will be achieved. The time factor identifies when the Indicator will be used to monitor overall performance of the policy. It should be noted that some policies will not have "stepping stone" targets and will only have one for the end of the period. That is because there isn't an appropriate intermediate levels that could be used or the policy will be realised in one hit, e.g. a site allocation. Due to the broad nature of the Indicator the failing to meet the Monitoring Targets is not, in itself a trigger for consideration in the AMR, but should be considered in conjunction with the more detailed responses from the Monitoring Factors.
Monitoring Factors	These are the detailed monitoring criteria that will be used to gauge whether a policy is failing. The Base and Trigger Levels relating to these will provide the basis for consideration of whether the policy needs to be addressed through the AMR. It should be noted that Monitoring Factors will be used not only to monitor the policy factors but will also monitor pertinent external factors that influence the conditions within which the policy operates. They can also be used to monitor the assumptions or factors that have influenced the content of the policy, e.g. SP17 includes Monitoring Factors relating to assumptions used in the Viability Study.
(Trigger Point) Area	This identifies the area over which the Base and Trigger levels apply. In some instances this relates just to the county borough as a whole, others to Strategy areas and Policy SP17 relates to the Affordable Housing Target areas. The area of coverage is important as it differentiates areas that could realise different results due to the existence of differing circumstances that would be lost if combined together.
(Trigger Point) Base Level	This sets out the level that the indicator would be at if the policy was working appropriately, or if the circumstances have remained unchanged in respect of background work or the prevailing conditions. It is used as the control against which the Monitoring Factor is considered, with the divergence from the base level being the indication of how the factor is being affected by the policy.
(Trigger Point) Trigger Level	This, in essence, is the level at which the policy has diverged from the base level to such an extent that it could identify that the policy is failing to be implemented. In identifying Trigger Levels consideration needs to be given to quantify what constitutes a significant variation from the Base level. This will be different for each Monitoring Factor and will need to take account of the natural variance around the Base Level, and what constitutes significant in terms of the Factor.

Appendix 2 – Change to the LDP Monitoring Framework

Policy	Indicator	Change	Reason	Year
SP1	Percentage of population in the 100 most deprived wards in Wales	Omitted	The base data is derived from the Welsh Index of Multiple Deprivation, whose guidance advises that the information is not suitable for monitoring change over time, making it unsuitable for monitoring purposes.	2011
SP2	Out-Commuting as a percentage of total commuting in and out of the county borough.	Out-Commuting as a percentage of total travel to work in and out of the county borough.	Both the base level and the Trigger Points relate to Travel to Work rather than just commuting.	2011
SP4	Vacancy Rates in the 3 of the principal town centres (only Bargoed, Blackwood & Caerphilly) Base Level – 2006	Vacancy Rates in the 5 principal town centres Base Level – 2010	There are 5 principal Town centres and monitoring all 5 is important. Since 2007 two counters have been used in Bargoed instead of the 1 used in 2006. Therefore the 2006 levels are not comparable with the current figures. 2010 is the adoption date and represents an appropriate base date for comparing the current football levels.	2011
SP6	Percentage of development with Design Statements	Omitted	Changes in Regulations now make design and access statements mandatory.	2011
	Number of Planning applications approved not in accordance with relevant Supplementary Planning Guidance (i.e. Development Design Guides relating to the proposed use or a Site Development Briefs).	Number of Planning applications approved not in accordance with relevant Supplementary Planning Guidance (i.e. Site Development Briefs).	It is an onerous and problematic task to capture data to monitor policy related SPG, if such information exists. Deletion of that part of the Factor makes monitoring possible.	2011
SP9	Percentage of waste management facilities required that are provided	Omitted	The Regional Waste Plan doesn't identify a specific requirement to measure the Indicator against and a regional facility, outside CCBC will cater for much of the demand	2011
SP19	Improvements in the transport infrastructure achieved	Omitted	The data is no longer available as a result of changes to WG Performance Indicators	2011
SP21	Developments approved in accordance with new Parking Standards	Omitted	It is a policy requirement that developments will only be permitted where they are in accordance with the parking standards. Monitoring this would only ever realise a 100% result making it meaningless in monitoring terms.	2011

Appendix 3 – Change to the SEA/SA Monitoring Framework

SEA/SA Area	Ref	Indicator	Change	Reason	Year
Population & Human Health	(1) b	Number of properties benefiting from energy saving grants	Omitted	The grants system has changed significantly meaning the relevant information is no longer available	2011
	(2) c	Percentage of unfit dwellings	Omitted	Changes to WG Performance Indicators the data is no longer available	2011
	(3) f	Percentage of residents by gender expressing fear of crime whilst walking in neighbourhood	The source data has changed. The indicator be amended to reflect the division of the original indicator into three separate parts: A) The percentage of Residents, whose perceptions of crime and disorder within the county borough, has worsened B) The percentage of Residents, whose perceptions of crime and disorder within their neighbourhood, has worsened C) The percentage of Residents, whose perceptions of crime and disorder within their local town centre, has worsened The 3 previously included indicators be amended to their omission and replacement with the following 2 indicators D) The percentage of Residents, whose perceptions of crime has got better in the last 2 years E) The percentage of Residents, whose perceptions of disorder has got better in the last 2 years	The information is derived from the County Borough Council's Householder Survey. Unfortunately the questions in the survey are liable to change and this impacts upon the data that informs this indicator. Changes to the Householder Survey question require changes to the Monitoring Framework to accurately reflect the information collected. The Householder Survey questionnaire has changed again and the Monitoring Framework needs to be amended to reflect the data collected.	2014
	(5) i	Number of racist incidents	Omitted	The data is no longer available	2011

SEA/SA Area	Ref	Indicator	Change	Reason	Year
	(5) j	Percentage of Black Minority Ethnic school children aged 15/16 with 5 or more Grades a-c passes at GCSE	Omitted	Relevant data is not available	2011
	(5) k	Number of recorded access complaints	Omitted	Due to changes in the CCBC Household Questionnaire the relevant data is no longer available	2011
	(6) n	Number of active volunteers	Omitted	The relevant data is not being captured.	2011
	(7) o	GVA: trend to reduce differential with rest of UK	Omitted	The data is only captured at a sub-regional level.	2011
	(7) r	Index of multiple deprivation	Omitted	The data is not comparable across a time series rendering it inappropriate for monitoring this indicator.	2011
	(8) s	Level of inward investment	Omitted	The data that is available is not updated regularly rendering it inappropriate to monitor this indicator.	2011
Population & Human Health	(8) u	Business start up rates	Omitted	The Council only Monitor start-ups that utilise council assistance. Other start-ups are not monitored so the data is not comprehensive.	2011
	(10) x	Perceptions of the County borough (%)	Amend the Indicator Target to reflect the percentage of Residents that rate the County Borough as Satisfied or Very Satisfied and include an additional new Indicator relating to Quality of Life Perceptions of quality of life (%)	The information is sourced from the Council's Biennial Household Survey. The questions included in the survey have recently changed and the Indicator is changed accordingly.	2011
Air Pollution	(1) a	Number of incidents when NO2 air quality fails	Omitted	Data is only published for locations, not the number of incidents, where air quality fails.	2011
Water	(1) a	Percentage of river lengths good or better quality for Chemical Quality.	Delete original 2 Indicators and replace with 1 new Indicator:	The Water Framework Directive changed the requirements for monitoring water quality from the General Quality Assessment based Indicators to the assessment of Ecological Status.	2011
	(1) b	Percentage of river lengths good or better quality for Biological Quality	Number of water bodies at Good Ecological Status		2011

SEA/SA Area	Ref	Indicator	Change	Reason	Year
	(1) c.	Litres of water consumed per resident	Omitted	Data is no longer available	2014
	(1) d	The number and volume of Environment Agency licensed abstractions	Omit the original Indicator and replace it with 2 additional new Indicators The number of Environment Agency licensed abstractions (Licenses) And The volume of Environment Agency licensed abstractions (litres Per year)	The original Indicator required two separate pieces of information and could not be amalgamated. Therefore the Indicator has been split into two new indicators.	2011
	(2) g	Number of residents of flood risk areas taking appropriate action.	Omitted	Available data only addressed part of the issue and would not, therefore, provide an accurate picture	2011
	(2) h	Number of properties flooded	Omitted	Available data only addressed part of the issue and would not, therefore, provide an accurate picture	2011
Geology and Geomorphology	(1) c	Hectares of land reclaimed	Omitted	The indicator requires the monitoring of land being brought into dereliction and land reclaimed. Both cases are difficult to define and so there is a huge scope for data error to influence the findings.	2011
	(1) a	Tonnes of CO2 / year			
	1) b	Carbon Footprint	Omitted	The data for this indicator is held externally to the council and is no longer available	2011
	(1) c	Number of businesses adopting Environmental Management Systems.	Omitted	The data is no longer available to monitor this indicator	2011
Climatic Factors	(2) d	Levels of private car ownership	Omitted	The only data source for accurately monitoring this information is the Census which is only updated every 10 years, so is inappropriate for	2011
	(2) e	Levels of public transport usage	Omitted	There is no readily accessible or comprehensive data set available to monitor this Indicator.	2011

SEA/SA Area	Ref	Indicator	Change	Reason	Year	
Climatic Factors	(2) f	Average journey time data	Omitted	The data for this indicator is held externally to the council and is no longer available	2011	
	(2) g.	Number of companies adopting green travel plans	Omitted	Green Travel plans are no longer used as TAN 18 sets out the requirements for requiring Travel Plans for developments. Given that all developments meeting the thresholds in the TAN will be required to prepare and implement travel plans the indicator will only realise a 100% figure which does not provide any useful information for monitoring purposes.	2014	
	(3) j	Percentage of energy used in CCB generated from renewable sources	Omitted	There are no suitable data sets available to monitor this Indicator	2011	
	(3) k	Amount of renewable energy supplied to the national grid	The Indicator as written should be omitted and be replaced by 2 new indicators, as follows: A) Amount (MW) installed capacity of electricity generated from renewable sources registered for Feed in tariff. B) Amount (MW) installed capacity of heat generated from renewable sources registered for Renewable Heat Incentive.	The best data source to monitor this indicator relates is derived from the Feed In Tariffs for renewable energy and renewable heat (which is to be introduced), so it is appropriate for the Indicator to be amended to reflect this.	2011	
			The second new indicator be omitted from the Monitoring Framework.	The Renewable heat Incentive has not been implemented and as such there is no data to support a monitoring indicator	2014	
	(3) l.		Number of new build properties generating electricity from renewable sources.	Omitted		2014

Material Assets	(1) a.	Length of Highway improved	<p>The original indicator be omitted from the monitoring framework and be replaced with the following 2 indicators:</p> <p>A) Percentage of Roads (a-class) in poor condition (National performance indicator)</p> <p>And</p> <p>B) Area of Principal network carriageway (A roads) resurfaced/ surface treated</p> <p>The Indicators be omitted from the monitoring framework.</p>	<p>This indicator was a Welsh Government indicator but is now no longer collected. The council does monitor road improvement works and this information should be used to inform the indicator.</p> <p>This information is no longer collected by the council.</p>	2014

Appendix 5 – Mandatory Indicators

Indicators	2012	2013	2014	2015	2016	2017
M1	The housing land supply taken from the current Housing Land Availability Study (TAN 1); (years)	14.2	3.5	2.9		
M2	The number of net additional affordable and general market dwellings built in the LPA's area (TAN 2).	50	115	232		
M3	Net employment land supply/development (ha/sq m.);	199	274	108		
M4	Amount of development, including housing, permitted on allocated sites in the development plan as a % of development plan allocations and as % of total development permitted (ha and units);	101.9	101.9	101.9		
		3.72	3.72	7.44		
		2.43%	1.28%	0.84%		
		30.76%	46.03%	16.33%		
		0.26%	3.90%	3.28%		
		0.05%	0.76%	0.64%		
		4.33%	57.89%	48.85%		
		0.64%	27.49%	12.51%		
		82.17%	66.75%	55.83%		
		4.42%	3.91%	4.45%		
M5	Average density of housing development permitted on allocated development plan sites;	30.7/Ha	30.6/Ha	31.3/ Ha		
M6	Amount of new development (ha) permitted on previously developed land (brownfield redevelopment and conversions) expressed as a percentage of all development permitted;	77.44%	61.10%	32.80%		
M7	Amount of major retail, office and leisure development (sq m) permitted in town centres expressed as a percentage of all major development permitted (TAN 4);	39.0%	0.00%	485%		

Indicators		2012	2013	2014	2015	2016	2017
M8	Amount of development (by TAN 15 paragraph 5.1 development category) permitted in C1 and C2 floodplain areas not meeting all TAN 15 tests (paragraph 6.2 i-v);	0	0	0			
	Emergency Services (number of developments)	6	10	1			
	Less Vulnerable Development (umber of developments)	5	9	2			
M9	Amount of greenfield and open space lost to development (ha) which is not allocated in the development plan;	12.46	2.29	36.08			
	Open Space lost to development (Hectares)	13.37	10.55	7.05			
M10	Amount of waste management capacity permitted expressed as a percentage of the total capacity required, as identified within the Regional Waste Plan (TAN 21);	The authorities are working together to bring forward regional facilities that will meet all of their requirements, although the facilities will be provided outside f the county borough. In any event the LDP includes 10.4 hectares of land to accommodate the future capacity requirements of the county borough					
M11	The extent of primary land-won aggregates permitted in accordance with the Regional Technical Statement for Aggregates expressed as a percentage of the total capacity required as identified in the Regional Technical Statement (MTAN);	186.1%	129.9%	126.7%			
M12	The capacity of Renewable Energy developments (MW) installed inside Strategic Search Areas by type (TAN 8).	There are no Strategic Search areas within the County Borough. Consequently this Indicator will not be monitored					

Appendix 6 - LDP Allocation Monitoring Table

Allocation		Developed	Planning App	Status / Comments
SP13	The Council will support the development of a leisure centre within the Heads of the Valleys Regeneration Area	Not Developed		
MW1.1	Cwmbargoed Disposal Point, north west of Fochriw	Not Developed		
HG1.2	Land East of Llechryd Bungalow	Not Developed		
HG1.3	Old Barrel Store	Developed	06/0066/FULL	Completed 2012
HG1.4	Lower Hill Street	Not Developed		Previous permission expired
HG1.5	Maerdy Garage adjacent to Maerdy House	Not Developed		Previous permission expired
